

# Romania's REVISAL – General record of employees

## European Platform Undeclared Work

The document discusses Romania's REVISAL, a digital register of employees managed by the Labour Inspectorate, aiming to streamline administrative processes and enhance labour inspections. It highlights the system's contribution to reducing bureaucratic burdens, improving detection of undeclared work, and providing comprehensive details about individual employment contracts. Employers are required to input various contract-related information, contributing to increased transparency in employer-employee relationships. Key success factors include the availability of a desktop application, comprehensive guidelines, and the system's integration into payroll software.
